

This function converts HTML data into a base64 encoded PDF document. Alternatively, converts the contents of a website URL into a base64 encoded document.

This function can be used in sequence with other functions, such as `fn_utilities:json2html` and `fn_utilities:base64 to attachment`. See Resilient workflows functions and the use of output workflow properties.

To install in "development mode"

```
pip install -e ./fn_html2pdf/
```

To import into Resilient, run:

```
resilient-circuits customize -l fn_html2pdf
```

After installation, the function will be available by running

```
resilient-circuits run
```

To uninstall,

```
pip uninstall fn_html2pdf
```

To package for distribution,

```
python ./fn_html2pdf/setup.py sdist
```

The resulting .tar.gz file can be installed using

```
pip install <filename>.tar.gz
```
